# Exhaust

## You need:

### Weathering Paints:

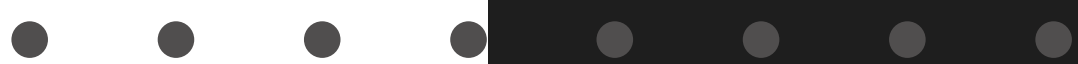

- mwe-017 burnt metal
- mwe-009 dark rust
- mwe-010 medium rust
- mwe-011 light rust

### Pigment:

- mwp-007 soot black

### Wash:

- mwe-008 earthy grime

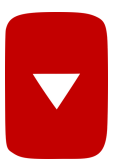

## How to:

1. Using an airbrush, paint the entire exhaust with Burnt Metal paint. Operate at a pressure of about 1.5 bar. Apply multiple thin coats for full coverage.
2. Rinse the airbrush with clean water and change the color to Dark Rust. Paint with a transparent layer from almost the end to the end of the exhaust, giving only a tarnish.
3. Change the color to Medium Rust and paint as above, but only closer to the center - about half the total exhaust length.
4. Change the color to light rust and paint the very center. Apply multiple coats until you get the desired effect.
5. Use Soot pigment to dust the tip of the exhaust. Done!
